## **Applied Chiropractic Sciences Council News Release**

### **DR. DAN MURPHY BRINGS VITAL UPDATES TO CHIROPRACTIC MANAGEMENT OF SPINAL TRAUMA IN SPECIAL SEMINAR THIS AUGUST IN SEATTLE, WA**

**July 1, 2014** — Internationally recognized authority in spinal trauma and educator Dr. Daniel J. Murphy will highlight recent research findings and correlate vital and practical insights for optimal clinical applications to chiropractic care of spinal trauma patients in a special seminar over August 16-17 in Seattle, Washington.

The 12-hour weekend seminar is focused on providing and proven tools for optimizing care, fueled by updated strategies and resources that are based on the latest research findings and clinical applications. From initial intake and assessment through case management and documentation protocols, along with addressing challenges encountered over “reasonable and necessary care,” the program is directed specifically for the practicing chiropractor and staff.

“Many patients and other health care providers are unaware that a collision as low as 5 mph can generate a whiplash injury complex with all of its issues and impact on health,” notes a previous attendee. “Whether it involves a sports injury or a personal injury, Dr. Murphy provides incredible insights and tools that help you more efficiently manage spinal trauma and the different issues we confront with soft-tissue injuries — plus helps document how chiropractic care is the optimal way to manage these injuries.”

The seminar is presented at the Hilton Seattle Airport and Conference center (starting Saturday 8/16 at noon through Sunday 8/17, ending 1:00 pm), easily accessible and equipped with a complimentary airport shuttle service. Registration includes refreshments and a comprehensive reference manual with course notes and extensive research references. ICA members and Council on Applied Chiropractic Sciences members enjoy registration discounts, with additional special credential “Refresher Rates” for doctors updating their credentials for the Diplomate in Applied Chiropractic Sciences (DACCS) and Chiropractic Certification in Spinal Trauma (CCST). Doctors are also encouraged to invite their staff to attend because of the excellent education they receive on chiropractic care, clinical certainty, and protocols for care and documentation; the program provides additional discount registration rates for two or more staff members registering from the same office.

The program’s 12 hours are cosponsored for continuing education credit in multiple states with Life Chiropractic College West. Doctors can register with the ICA Council on Applied Chiropractic Sciences by phone at 703-528-5000 (Eastern office hours) or online at [www.icaappliedsciences.org](http://www.icaappliedsciences.org); for additional questions they can also email directly to [science@chiropractic.org](mailto:science@chiropractic.org).
